

Placement and Career Support Guide

Placement and Career Support Guide

This guide helps students prepare for internships, placements, and technology careers.

Understanding the Job Market

Companies hire based on skills, projects, problem-solving ability, communication, and consistency.

What Companies Look For

Technical skills, projects, problem solving, communication, teamwork, and learning ability.

Importance of Projects

Projects demonstrate practical capability and are often more important than certificates.

Building a Strong Resume

Include skills, projects, education, certifications, and experience. Keep it concise.

GitHub and Portfolio

Maintain an active GitHub profile and a professional portfolio website.

Placement Roadmap

Learn skills → Build projects → Create resume → GitHub portfolio → DSA practice → Mock interviews → Job applications.

DSA Preparation

Focus on arrays, strings, linked lists, stacks, queues, trees, graphs, and dynamic programming.

Interview Preparation

Prepare for online assessments, technical interviews, project discussions, and HR rounds.

Internships

Apply through LinkedIn, company career pages, referrals, and internship portals.

LinkedIn Optimization

Use a professional profile, showcase projects, and connect with industry professionals.

Career Paths

Web Development, AI Engineering, Data Science, and DevOps each offer multiple career opportunities.

What to Learn Beyond the Course

TypeScript, Next.js, PostgreSQL, Docker, Cloud, MLOps, System Design, Terraform, and more depending on specialization.

Placement Support Services

Resume reviews, mock interviews, career guidance, project reviews, workshops, and job alerts.

Final Advice

Skills > Certificates. Projects > Theory. Consistency > Intensity.
