

Assignment Evaluation Guide

Introduction

This document establishes a standardized framework for evaluating assignments, projects, lab work, coding exercises, and capstone submissions within the Learning Management System (LMS).

The purpose of this guide is to ensure:

- Fair evaluation
- Consistent grading
- Transparent assessment
- Constructive feedback
- Academic integrity

All instructors must follow these guidelines when assessing student work.

Chapter 1: Objectives of Assessment

Assessment should measure:

Knowledge

Can the student explain concepts correctly?

Application

Can the student apply concepts to practical problems?

Problem Solving

Can the student identify and solve challenges independently?

Communication

Can the student clearly present their work?

Professional Readiness

Can the student demonstrate industry-level skills?

Chapter 2: Types of Assignments

Assignments may include:

Coding Assignments

Examples:

- React Components
- REST APIs
- Database Queries
- Machine Learning Models

Written Assignments

Examples:

- Research Reports
- Technical Documentation
- Case Studies

Practical Labs

Examples:

- Docker Exercises
- Kubernetes Deployments
- Data Analysis Tasks

Projects

Examples:

- LMS Development
- AI Chatbot
- E-Commerce Platform

Chapter 3: Evaluation Principles

Teachers should ensure:

Fairness

All students must be evaluated using identical criteria.

Consistency

Similar submissions should receive similar scores.

Transparency

Evaluation criteria should be communicated beforehand.

Objectivity

Personal preferences should not affect grading.

Chapter 4: General Grading Rubric

Recommended grading distribution:

Problem Understanding → 15% Implementation Accuracy → 30% Code Quality / Structure → 20% Innovation & Creativity → 10% Documentation → 10% Testing & Validation → 10% Presentation → 5%

Total:

```
``text id="total_score"
100 Marks
```

Chapter 5: Coding Assignment Evaluation

Evaluate:

Functionality

Questions:

- Does the solution work?
- Are requirements met?
- Are outputs correct?

Suggested Weight:

```
``text id="func_weight" 40%
```

```
---

### Code Quality

Review:

- Naming conventions
- Readability
- Structure
- Maintainability

Suggested Weight:

```text id="quality_weight"
20%
```

---

## Error Handling

Check:

- Input validation
- Exception handling
- Edge cases

Suggested Weight:

```
```text id="error_weight" 15%
```

```
---

### Performance

Review:

- Time complexity
- Space complexity
- Scalability

Suggested Weight:

```text id="perf_weight"
15%
```

## Documentation

Check:

- Comments
- README
- Usage instructions

Suggested Weight:

```text id="doc\_weight" 10%

```
---  
  
# Chapter 6: Web Development Project Rubric  
  
Example:  
  
### Frontend  
  
```text id="frontend_marks"  
UI Design → 15
Responsiveness → 10
Accessibility → 5
```

## Backend

```text id="backend\_marks" API Design → 15 Business Logic → 15 Database Integration → 10

```
### Security  
  
```text id="security_marks"  
Authentication → 10
Authorization → 5
```

## Deployment

```text id="deploy\_marks" Hosting → 5 Production Readiness → 5

```
### Documentation
```

```
```text id="project_doc_marks"
Documentation → 5
```

Total:

```
```text id="project_total" 100 Marks
```

```
---

# Chapter 7: Data Science Assignment Rubric

Evaluate:

### Data Cleaning

```text id="ds_cleaning"
20 Marks
```

## Feature Engineering

```
```text id="ds_features" 20 Marks
```

```
### Model Selection

```text id="ds_model"
20 Marks
```

## Evaluation Metrics

```
```text id="ds_metrics" 20 Marks
```

```
### Interpretation

```text id="ds_interpret"
20 Marks
```

---

# Chapter 8: AI Project Evaluation

Assess:

## Dataset Quality

## Model Performance

## Experiment Design

## Evaluation Metrics

## Deployment

## Documentation

Recommended distribution:

Dataset → 15 Model → 25 Evaluation → 20 Deployment → 15 Documentation → 15 Innovation → 10

---

### # Chapter 9: Documentation Evaluation

Good documentation should include:

### Project Overview

### Installation Steps

### Usage Instructions

### Screenshots

### Architecture Diagram

### API Documentation

### Future Improvements

Marks should reflect clarity and completeness.

---

### # Chapter 10: Capstone Project Evaluation

Capstone projects should simulate real-world development.

Suggested Rubric:

```
Problem Statement
```

```
```text id="capstone_problem"  
10 Marks
```

Solution Design

```
```text id="capstone_design" 20 Marks
```

```
Implementation
```

```
```text id="capstone_implementation"  
30 Marks
```

Testing

```
```text id="capstone_testing" 10 Marks
```

```
Deployment
```

```
```text id="capstone_deployment"  
10 Marks
```

Presentation

```
```text id="capstone_presentation" 10 Marks
```

```
Documentation
```

```
```text id="capstone_documentation"  
10 Marks
```

Chapter 11: Late Submission Policy

Suggested penalties:

```
```text id="late_policy" 1-2 Days Late → -10% 3-5 Days Late → -20% More than 5 Days → -30%
```

Exceptions may be granted for approved circumstances.

---

## # Chapter 12: Academic Integrity

Violations include:

- Plagiarism
- Code copying
- Unauthorized collaboration
- AI-generated submissions without disclosure

Teachers should:

- Document evidence
- Notify academic coordinators
- Apply institutional policies

---

## # Chapter 13: Plagiarism Detection

Methods:

### ### Manual Review

Compare:

- Structure
- Logic
- Variable names

### ### Automated Tools

Examples:

- Turnitin
- MOSS
- Similarity Checkers

Recommended thresholds:

```text id="plagiarism\_threshold"

0-20% → Acceptable

20-40% → Review

40%+ → Investigate

Chapter 14: Providing Effective Feedback

Good feedback should:

Identify Strengths

Example:

```
```text id="feedback_positive" API implementation is well structured.
```

```
Identify Improvements
```

Example:

```
```text id="feedback_improve"
Error handling should be improved for invalid requests.
```

Suggest Next Steps

Example:

```
```text id="feedback_next" Consider implementing pagination and caching.
```

```

```

```
Chapter 15: Viva Evaluation
```

Suggested criteria:

```
Understanding
```

```
```text id="viva_understanding"
40%
```

Technical Explanation

```
```text id="viva_explanation" 30%
```

```
Problem Solving
```

```
```text id="viva_problem_solving"
20%
```

Communication

```
```text id="viva_communication" 10%
```

```

Chapter 16: Team Project Evaluation

Evaluate:

Individual Contribution

Collaboration

Technical Work

Documentation

Presentation

Use peer reviews when appropriate.

Chapter 17: Assignment Review Workflow

```text id="review_flow"
Submission
  ↓
Plagiarism Check
  ↓
Technical Evaluation
  ↓
Feedback Writing
  ↓
Score Assignment
  ↓
Publish Results
```

Recommended turnaround time:

```
```text id="review_time" Within 7 Days
```

---

## # Chapter 18: Grade Moderation

For large courses:

- Randomly review graded assignments
- Verify consistency
- Resolve discrepancies

This improves fairness and reliability.

---

## # Chapter 19: Handling Re-evaluation Requests

Students may request reviews.

Process:

```text id="reevaluation\_flow"

Request

↓

Review Submission

↓

Verify Marks

↓

Update if Necessary

All changes should be documented.

Chapter 20: Summary

Assessment should be fair, transparent, objective, and aligned with learning outcomes. Teachers should evaluate not only correctness but also problem-solving ability, code quality, creativity, communication, and professional readiness. Constructive feedback and consistent grading practices help students improve while maintaining academic standards across the institution.
